1. Overview

Swagger specification for Account Information APIs

1.1. Version information

Version : v0.1

1.2. Contact information

Contact : Claudio Viola

Contact Email : claudio.viola@openbanking.org.uk

1.3. License information

License : open-licence

License URL : <https://www.openbanking.org.uk/open-licence>

Terms of service : <https://www.openbanking.org.uk/terms>

1.4. URI scheme

BasePath : /open-banking

Schemes : HTTPS

1.5. Produces

- `application/json`

2. Paths

2.1. Get Accounts

GET /accounts

2.1.1. Description

Get a list of accounts

2.1.2. Responses

HTTP Code	Description	Schema
200	Accounts successfully retrieved	Accounts GET response
400	Bad Request	No Content
401	Unauthorized	No Content
403	Forbidden	No Content
404	Not Found	No Content
500	Internal Server Error	No Content

Accounts GET response

Name	Schema
Accounts <i>required</i>	< Accounts > array
Links <i>optional</i>	Links

Accounts

Name	Description	Schema
Account <i>required</i>	Provides the details to identify an account.	Account
AccountId <i>required</i>	A unique identifier used to identify the account resource. This identifier has no meaning to the account owner. Length : 1 - 40	string
Currency <i>required</i>	Identification of the currency in which the account is held. Usage: Currency should only be used in case one and the same account number covers several currencies and the initiating party needs to identify which currency needs to be used for settlement on the account. Pattern : "[A-Z]{3}"	string

Name	Description	Schema
Nickname <i>optional</i>	The nickname of the account, assigned by the account owner in order to provide an additional means of identification of the account. Length : 1 - 70	string
Servicer <i>required</i>	Party that manages the account on behalf of the account owner, that is manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account.	Servicer

Account

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 34	string
Name <i>required</i>	Name of the account, as assigned by the account servicing institution, in agreement with the account owner in order to provide an additional means of identification of the account. Usage: The account name is different from the account owner name. The account name is used in certain user communities to provide a means of identifying the account, in addition to the account owner's identity and the account number. Length : 1 - 70	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BBAN)
SecondaryIdentification <i>optional</i>	This is secondary identification of the account, as assigned by the account servicing institution. This can be used by building societies to additionally identify accounts with a roll number (in addition to a sort code and account number combination). Length : 1 - 34	string

Servicer

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 35	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BICFI, UKSortCode)

Links

Name	Schema
first <i>optional</i>	string (uri)

Name	Schema
last <i>optional</i>	string (uri)
next <i>optional</i>	string (uri)
prev <i>optional</i>	string (uri)
self <i>required</i>	string (uri)

2.1.3. Produces

- `application/json`

2.1.4. Security

Type	Name	Scopes
oauth2	PSUOAuth2Security	accounts:read

2.2. Create an account request

POST /accounts-requests

2.2.1. Description

Create an account request

2.2.2. Body parameter

Create an Account Request

Name : body

Flags : required

Name	Description	Schema
Permissions <i>required</i>	Specifies the Open Banking account request types. This is a list of the data clusters being consented by the PSU, and requested for authorisation with the ASPSP.	< enum (ReadAccounts, ReadAccountsSensitive, ReadBalances, ReadBeneficiaries, ReadBeneficiariesSensitive, ReadDirectDebits, ReadStandingOrders , ReadStandingOrdersSensitive, ReadTransactions, ReadTransactionsCredits, ReadTransactionsDebits, ReadTransactionsSensitive) > array
PermissionsExpirationDate Time <i>optional</i>	Specified date and time the permissions will expire. If this is not populated, the permissions will be open ended.	string (date-time)
SelectedAccounts <i>optional</i>	Provides the details to identify accounts in the account information request.	< SelectedAccounts > array
TransactionFromDateTime <i>optional</i>	Specified start date and time for the transaction query period. If this is not populated, the request will be open ended.	string (date-time)
TransactionToDateTime <i>optional</i>	Specified end date and time for the transaction query period. If this is not populated, the request will be open ended.	string (date-time)

SelectedAccounts

Name	Description	Schema
Account <i>required</i>		Account
Servicer <i>required</i>	Party that manages the account on behalf of the account owner, that is manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account. This is the servicer of the beneficiary account	Servicer

Account

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 34	string
Name <i>required</i>	Name of the account, as assigned by the account servicing institution, in agreement with the account owner in order to provide an additional means of identification of the account. Usage: The account name is different from the account owner name. The account name is used in certain user communities to provide a means of identifying the account, in addition to the account owner's identity and the account number. Length : 1 - 70	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BBAN)
SecondaryIdentification <i>optional</i>	This is secondary identification of the account, as assigned by the account servicing institution. This can be used by building societies to additionally identify accounts with a roll number (in addition to a sort code and account number combination). Length : 1 - 34	string

Servicer

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 35	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BICFI, UKSortCode)

2.2.3. Responses

HTTP Code	Description	Schema
201	Account Request resource successfully created	Account Request POST response
400	Bad Request	No Content
401	Unauthorized	No Content
403	Forbidden	No Content
409	Conflict	No Content
500	Internal Server Error	No Content

Account Request POST response

Name	Description	Schema
AccountIds <i>optional</i>	A unique and immutable identifier used to identify the account resource. This identifier has no meaning to the account owner.	< string > array
AccountRequestId <i>optional</i>	Unique identification as assigned to identify the account request resource. Length : 1 - 40	string
Permissions <i>required</i>	Specifies the Open Banking account request types. This is a list of the data clusters being consented by the PSU, and requested for authorisation with the ASPSP.	< enum (ReadAccounts, ReadAccountsSensitive, ReadBalances, ReadBeneficiaries, ReadBeneficiariesSensitive, ReadDirectDebits, ReadStandingOrders, ReadStandingOrdersSensitive, ReadTransactions, ReadTransactionsCredits, ReadTransactionsDebits, ReadTransactionsSensitive) > array
PermissionsExpirationDate <i>optional</i>	Specified date and time the permissions will expire. If this is not populated, the permissions will be open ended.	string (date-time)
SelectedAccounts <i>optional</i>	Provides the details to identify accounts in the account information request.	< SelectedAccounts > array

Name	Description	Schema
Status <i>optional</i>	Specifies the status of the account request resource in code form.	enum (AwaitingAuthorisation, Authenticated, Rejected)
TransactionFromDateTime <i>optional</i>	Specified start date and time for the transaction query period. If this is not populated, the request will be open ended.	string (date-time)
TransactionToDateTime <i>optional</i>	Specified end date and time for the transaction query period. If this is not populated, the request will be open ended.	string (date-time)

SelectedAccounts

Name	Description	Schema
Account <i>required</i>		Account
Servicer <i>required</i>	Party that manages the account on behalf of the account owner, that is manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account. This is the servicer of the beneficiary account	Servicer

Account

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 34	string
Name <i>required</i>	Name of the account, as assigned by the account servicing institution, in agreement with the account owner in order to provide an additional means of identification of the account. Usage: The account name is different from the account owner name. The account name is used in certain user communities to provide a means of identifying the account, in addition to the account owner's identity and the account number. Length : 1 - 70	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BBAN)

Account Transactions GET response

Name	Description	Schema
Links <i>optional</i>		Links
Transactions <i>required</i>	Array of Transactions	< Transactions > array

Links

Name	Schema
first <i>optional</i>	string (uri)
last <i>optional</i>	string (uri)
next <i>optional</i>	string (uri)

Name	Schema
prev <i>optional</i>	string (uri)
self <i>required</i>	string (uri)

Transactions

Name	Description	Schema
AccountId <i>required</i>	A unique identifier used to identify the account resource. This identifier has no meaning to the account owner. Length : 1 - 40	string
AddressLine <i>optional</i>	Information that locates and identifies a specific address, as defined by postal services, that is presented in free format text. Length : 1 - 70	string
Amount <i>required</i>	Amount of money in the cash entry.	Amount
Balance <i>required</i>	Set of elements used to define the balance as a numerical representation of the net increases and decreases in an account after a transaction entry is applied to the account.	Balance
BankTransactionCode <i>required</i>	Set of elements used to fully identify the type of underlying transaction resulting in an entry.	BankTransactionCode
BookingDate <i>optional</i>	Date and time when an entry is posted to an account on the account servicer's books. Usage: Booking date is the expected booking date, unless the status is booked, in which case it is the actual booking date.	BookingDate
CreditDebitIndicator <i>required</i>	Indicates whether the entry is a credit or a debit entry	enum (Credit, Debit)
MerchantDetails <i>optional</i>	Details of the merchant involved in the transaction.	MerchantDetails
ProprietaryBankTransactionCode <i>optional</i>	Set of elements to fully identify a proprietary bank transaction code.	ProprietaryBankTransactionCode
Status <i>required</i>	Status of an entry on the books of the account servicer	enum (Booked, Pending)
TransactionId <i>optional</i>	maxLength 40 text Length : 1 - 40	string
TransactionInformation <i>optional</i>	Further details of the transaction. This is the transaction narrative, which in unstructured text. Length : 1 - 500	string

Name	Description	Schema
TransactionReference <i>optional</i>	Unique reference for the transaction. This reference is optionally populated, and may as an example be the FPID in the Faster Payments context. Length : 1 - 35	string
ValueDate <i>optional</i>	Date and time at which assets become available to the account owner in case of a credit entry, or cease to be available to the account owner in case of a debit entry. Usage: If entry status is pending and value date is present, then the value date refers to an expected/requested value date. For entries subject to availability/float and for which availability information is provided, the value date must not be used. In this case the availability component identifies the number of availability days.	ValueDate

Amount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : "[A-Z]{3}"	string

Balance

Name	Description	Schema
Amount <i>required</i>	Amount of money of the cash balance after a transaction entry is applied to the account..	Amount
CreditDebitIndicator <i>required</i>	Indicates whether the balance is a credit or a debit balance. Usage: A zero balance is considered to be a credit balance.	enum (Credit, Debit)
Type <i>required</i>	Balance type, in a coded form.	enum (ClosingAvailable, ClosingBooked, ForwardAvailable, InterimAvailable, InterimBooked, OpeningAvailable, OpeningBooked, PreviouslyClosedBooked, Expected)

Amount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string

PSC100: T232 - Must be present if Schedule Code = WkInMnthDay. PSC110: T225 - Interval in weeks must be within defined bounds (range 1 to 9). PSC110: T230 - Must be present if Schedule Code = IntrvlWkDay. PSC120: T226 - Interval in months must be a valid enumeration value (range 1 to 6, 12 and 24). PSC120: T234 - Must be present if Schedule Code = IntrvlMnthDay. PSC130: T227 - Quarter Day must be a valid enumeration value. PSC130: T235 - Must be present if Schedule Code = QtrDay. The regular expression for this element combines five smaller versions for each permitted pattern. To aid legibility - the components are presented individually here:</p> <p>EvryWorkgDay IntrvlWkDay:0[1-9]:0[1-5]</p> <p>WkInMnthDay:0[1-5]:0[1-5] IntrvlMnthDay:(0[1-6] 12 24):(-0[1-5] 0[1-9] [12][0-9] 3[01])</p> <p>QtrDay:(ENGLISH SCOTTISH RECEIVED)</p> <p>Mandatory/Conditional/Optional/Parent/Leaf: OL Type: 35 char string Regular Expression(s):</p> <p>(EvryWorkgDay) (IntrvlWkDay:0[1-9]:0[1-5]) (WkInMnthDay:0[1-5]:0[1-5]) (IntrvlMnthDay:(0[1-6] 12 24):(-0[1-5] 0[1-9] [12][0-9] 3[01])) (QtrDay:(ENGLISH SCOTTISH RECEIVED))</p> <p>Pattern : "[^] EvryWorkgDay) (IntrvlWkDay:0[1-9]:0[1-5]) (WkInMnthDay:0[1-5]:0[1-5]) (IntrvlMnthDay:(0[1-6] 12 24):(-0[1-5] 0[1-9] [12][0-9] 3[01])) (QtrDay:(ENGLISH SCOTTISH RECEIVED)))\$"</p>	string
NextPayment Amount required	The amount of the next Standing Order	NextPaymentAmount
NextPayment Date required	<p>The date on which the next payment for a Standing Order schedule will be made.</p> <p>Pattern : "[^][0-9]{4}-(0[1-9] (1[0 1 2]))- 0[1-9] ((1 2)[0-9]) (30 31)\$"</p>	string

Name	Description	Schema
Servicer <i>required</i>	Party that manages the account on behalf of the account owner, that is manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account. This is the servicer of the beneficiary account	Servicer
StandingOrderId <i>optional</i>	A unique and immutable identifier used to identify the standing order resource. This identifier has no meaning to the account owner. Length : 1 - 40	string

CreditorAccount

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 34	string
Name <i>required</i>	Name of the account, as assigned by the account servicing institution, in agreement with the account owner in order to provide an additional means of identification of the account. Usage: The account name is different from the account owner name. The account name is used in certain user communities to provide a means of identifying the account, in addition to the account owner's identity and the account number. Length : 1 - 70	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BBAN)
SecondaryIdentification <i>optional</i>	This is secondary identification of the account, as assigned by the account servicing institution. This can be used by building societies to additionally identify accounts with a roll number (in addition to a sort code and account number combination). Length : 1 - 34	string

FinalPaymentAmount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : "[A-Z]{3}\$"	string

FirstPaymentAmount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : "^[A-Z]{3}\$"	string

NextPaymentAmount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : "^[A-Z]{3}\$"	string

Servicer

Name	Description	Schema
Identification <i>required</i>	Unique and unambiguous identification of the servicing institution. Length : 1 - 35	string
SchemeName <i>required</i>	Name of the identification scheme, in a coded form as published in an external list.	enum (BICFI, UKSortCode)

Account Transactions GET response

Name	Description	Schema
Links <i>optional</i>		Links
Transactions <i>required</i>	Array of Transactions	< Transactions > array

Links

Name	Schema
first <i>optional</i>	string (uri)
last <i>optional</i>	string (uri)
next <i>optional</i>	string (uri)
prev <i>optional</i>	string (uri)
self <i>required</i>	string (uri)

Transactions

Name	Description	Schema
AccountId <i>required</i>	A unique identifier used to identify the account resource. This identifier has no meaning to the account owner. Length : 1 - 40	string
AddressLine <i>optional</i>	Information that locates and identifies a specific address, as defined by postal services, that is presented in free format text. Length : 1 - 70	string
Amount <i>required</i>	Amount of money in the cash entry.	Amount
Balance <i>required</i>	Set of elements used to define the balance as a numerical representation of the net increases and decreases in an account after a transaction entry is applied to the account.	Balance
BankTransactionCode <i>required</i>	Set of elements used to fully identify the type of underlying transaction resulting in an entry.	BankTransactionCode
BookingDate <i>optional</i>	Date and time when an entry is posted to an account on the account servicer's books. Usage: Booking date is the expected booking date, unless the status is booked, in which case it is the actual booking date.	BookingDate
CreditDebitIndicator <i>required</i>	Indicates whether the entry is a credit or a debit entry	enum (Credit, Debit)
MerchantDetails <i>optional</i>	Details of the merchant involved in the transaction.	MerchantDetails
ProprietaryBankTransactionCode <i>optional</i>	Set of elements to fully identify a proprietary bank transaction code.	ProprietaryBankTransactionCode
Status <i>required</i>	Status of an entry on the books of the account servicer	enum (Booked, Pending)
TransactionId <i>optional</i>	maxLength 40 text Length : 1 - 40	string
TransactionInformation <i>optional</i>	Further details of the transaction. This is the transaction narrative, which in unstructured text. Length : 1 - 500	string
TransactionReference <i>optional</i>	Unique reference for the transaction. This reference is optionally populated, and may as an example be the FPID in the Faster Payments context. Length : 1 - 35	string

Name	Description	Schema
ValueDate <i>optional</i>	Date and time at which assets become available to the account owner in case of a credit entry, or cease to be available to the account owner in case of a debit entry. Usage: If entry status is pending and value date is present, then the value date refers to an expected/requested value date. For entries subject to availability/float and for which availability information is provided, the value date must not be used. In this case the availability component identifies the number of availability days.	ValueDate

Amount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : "^[A-Z]{3}\$"	string

Balance

Name	Description	Schema
Amount <i>required</i>	Amount of money of the cash balance after a transaction entry is applied to the account..	Amount
CreditDebitIndicator <i>required</i>	Indicates whether the balance is a credit or a debit balance. Usage: A zero balance is considered to be a credit balance.	enum (Credit, Debit)
Type <i>required</i>	Balance type, in a coded form.	enum (ClosingAvailable, ClosingBooked, ForwardAvailable, InterimAvailable, InterimBooked, OpeningAvailable, OpeningBooked, PreviouslyClosedBooked, Expected)

Amount

Name	Description	Schema
Amount <i>required</i>	Pattern : "^-?\d{1,13}\.\d{1,5}\$"	string

Name	Description	Schema
Currency <i>required</i>	A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 'Codes for the representation of currencies and funds' Pattern : <code>"^[A-Z]{3}\$"</code>	string

BankTransactionCode

Name	Description	Schema
Code <i>required</i>	Specifies the family within a domain.	string
SubCode <i>optional</i>	Specifies the sub-product family within a specific family.	string

BookingDate

Name	Description	Schema
Date <i>optional</i>	ISODate YYYY-MM-DD Pattern : <code>"^[0-9]{4}-(0[1-9] (1[0 1 2]))- 0[1-9] ((1 2)[0-9]) (30 31)\$"</code>	string
DateTime <i>optional</i>		string (date-time)

MerchantDetails

Name	Description	Schema
MerchantCategoryCode <i>optional</i>	Category code conform to ISO 18245, related to the type of services or goods the merchant provides for the transaction. Length : 3 - 4	string
Name <i>required</i>	Name by which the merchant is known. Length : 1 - 350	string

ProprietaryBankTransactionCode

Name	Description	Schema
Code <i>required</i>	Proprietary bank transaction code to identify the underlying transaction. Length : 1 - 35	string
Issuer <i>optional</i>	Identification of the issuer of the proprietary bank transaction code. Length : 1 - 35	string

ValueDate

Name	Description	Schema
Date <i>optional</i>	ISODate YYYY-MM-DD Pattern : <code>"^[0-9]{4}-(0[1-9] (1[0 1 2]))- 0[1-9] ((1 2)[0-9]) (30 31\$"</code>	string
DateTime <i>optional</i>		string (date-time)
